GUÍA de los patrones y las experiencias

1. Estados de la materia

Agua gaseosa

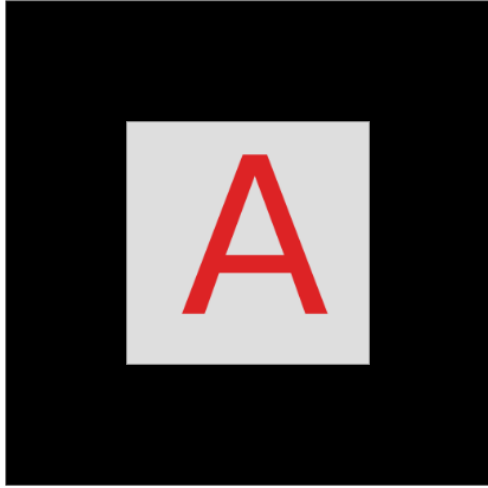

Agua sólida

Agua líquida

2. Átomos, moléculas e iones:

molécula

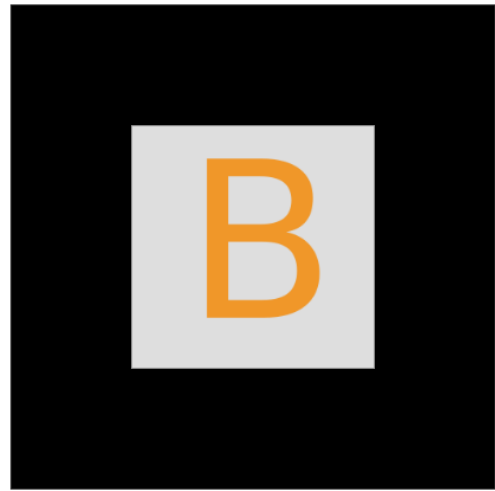

anión

catión

3. Ácido-base

pH ácido

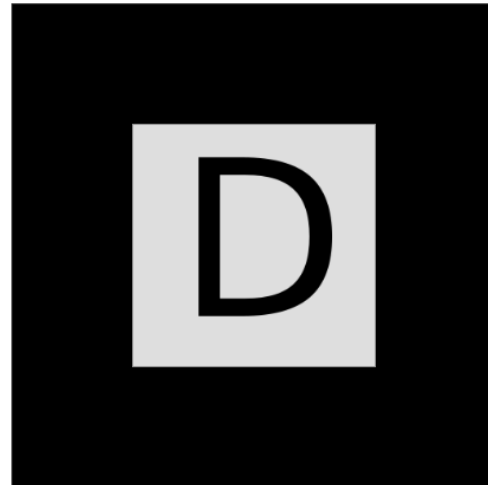

+

Fenolftaleína

+

+

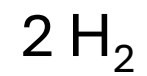

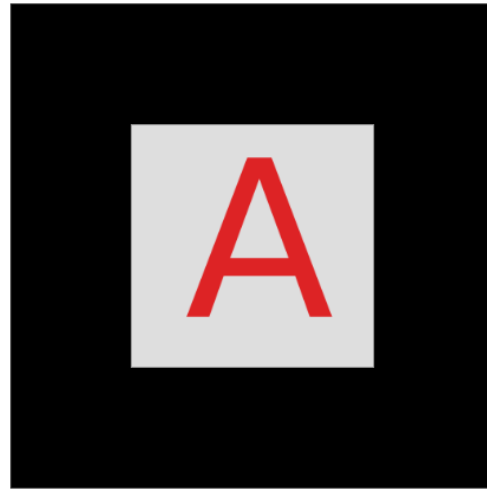

pH > 11

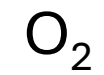

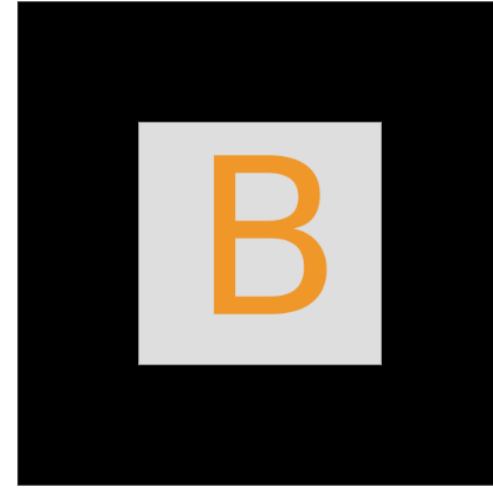

pH básico

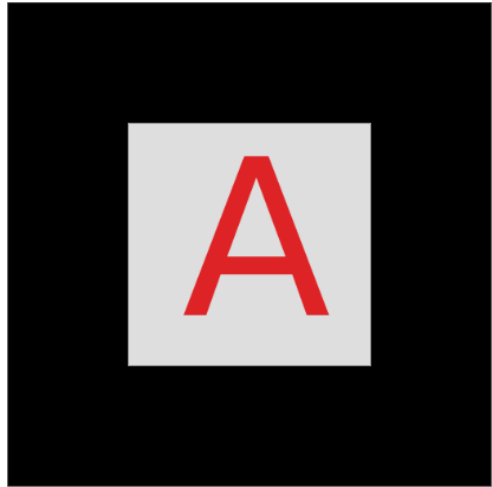

4. Formación de agua:

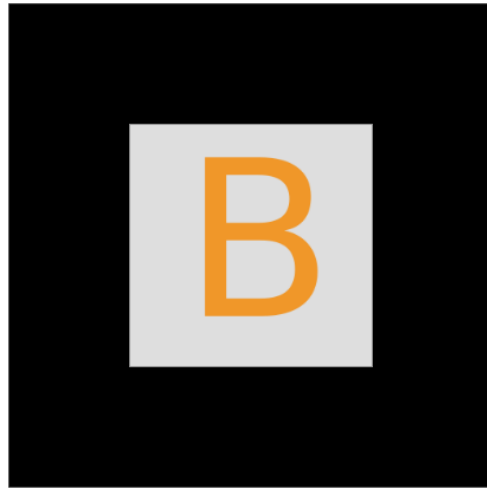

+

5. Orbitales atómicos

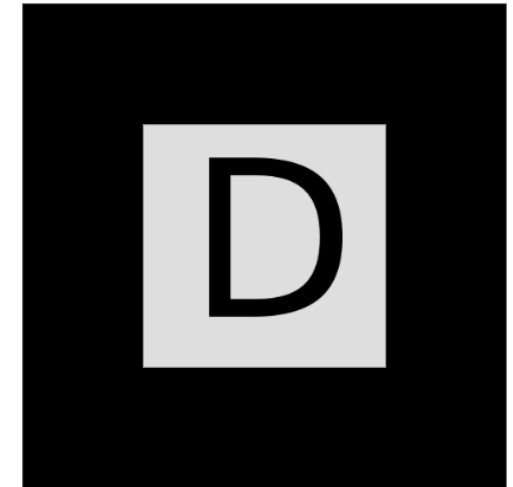

Orbital “s”

Orbital “p”

Orbital “d”

Orbital “f”

6. Tabla periódica

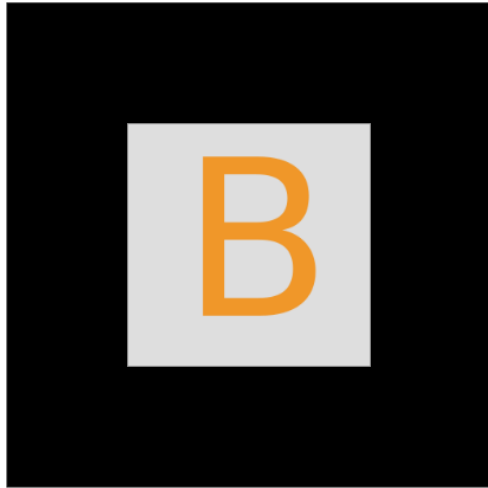

Tabla periódica
(radio atómico)

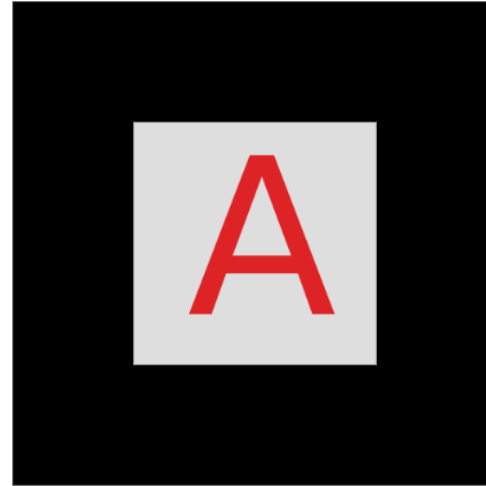

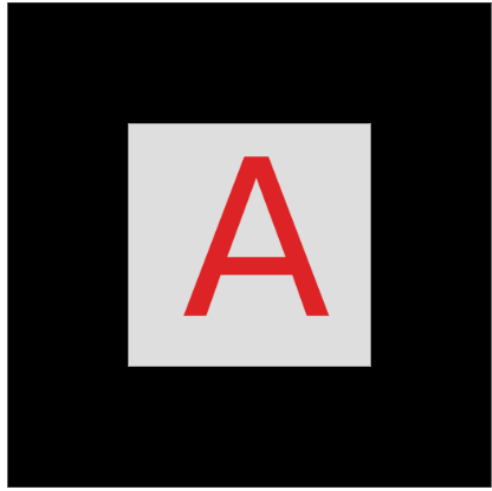

Tabla periódica

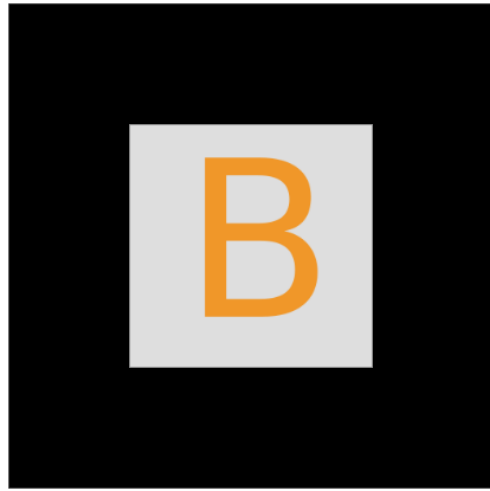

Tabla periódica
(electronegatividad)

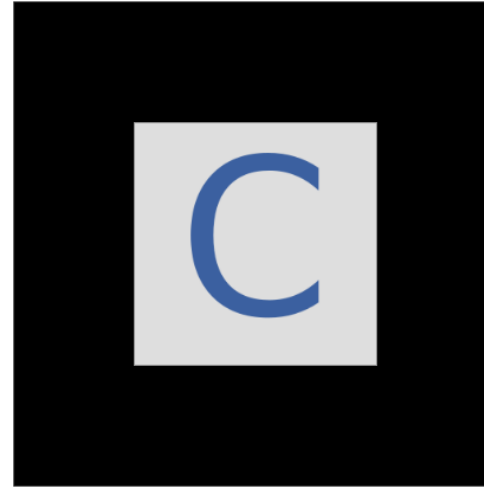

7. Enlace iónico y enlace covalente (simple, doble y triple)

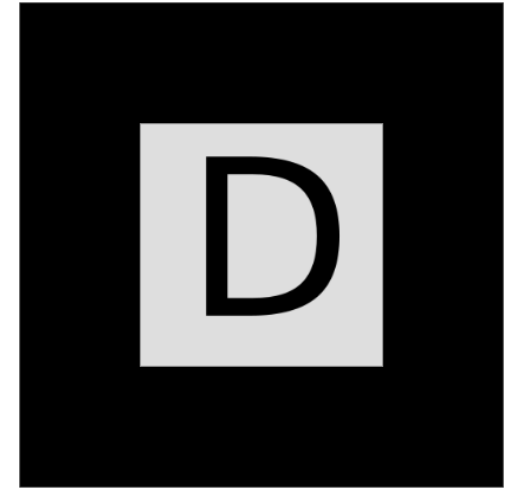

E. iónico

E. Covalente
simple

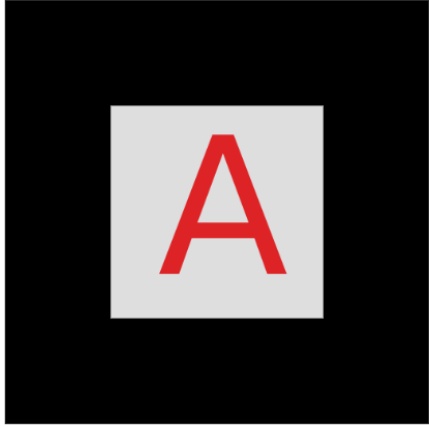

E. Covalente
doble

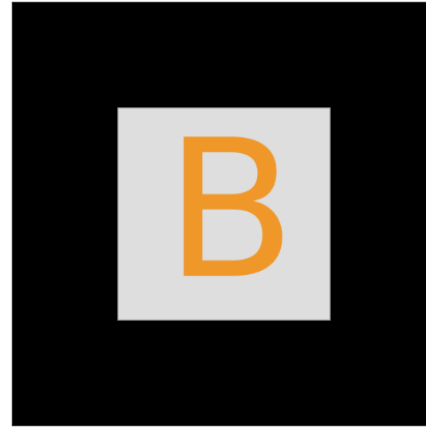

E. Covalente
triple

8. Geometría molecular

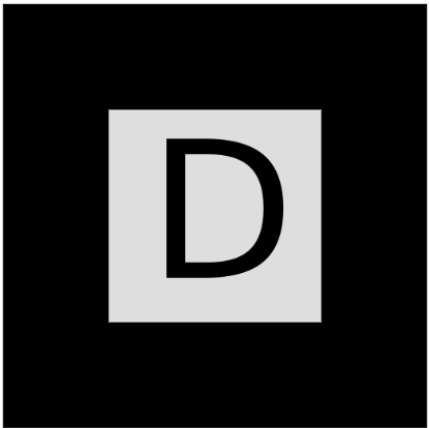

lineal

angular

trigonal plana

tetraédrica

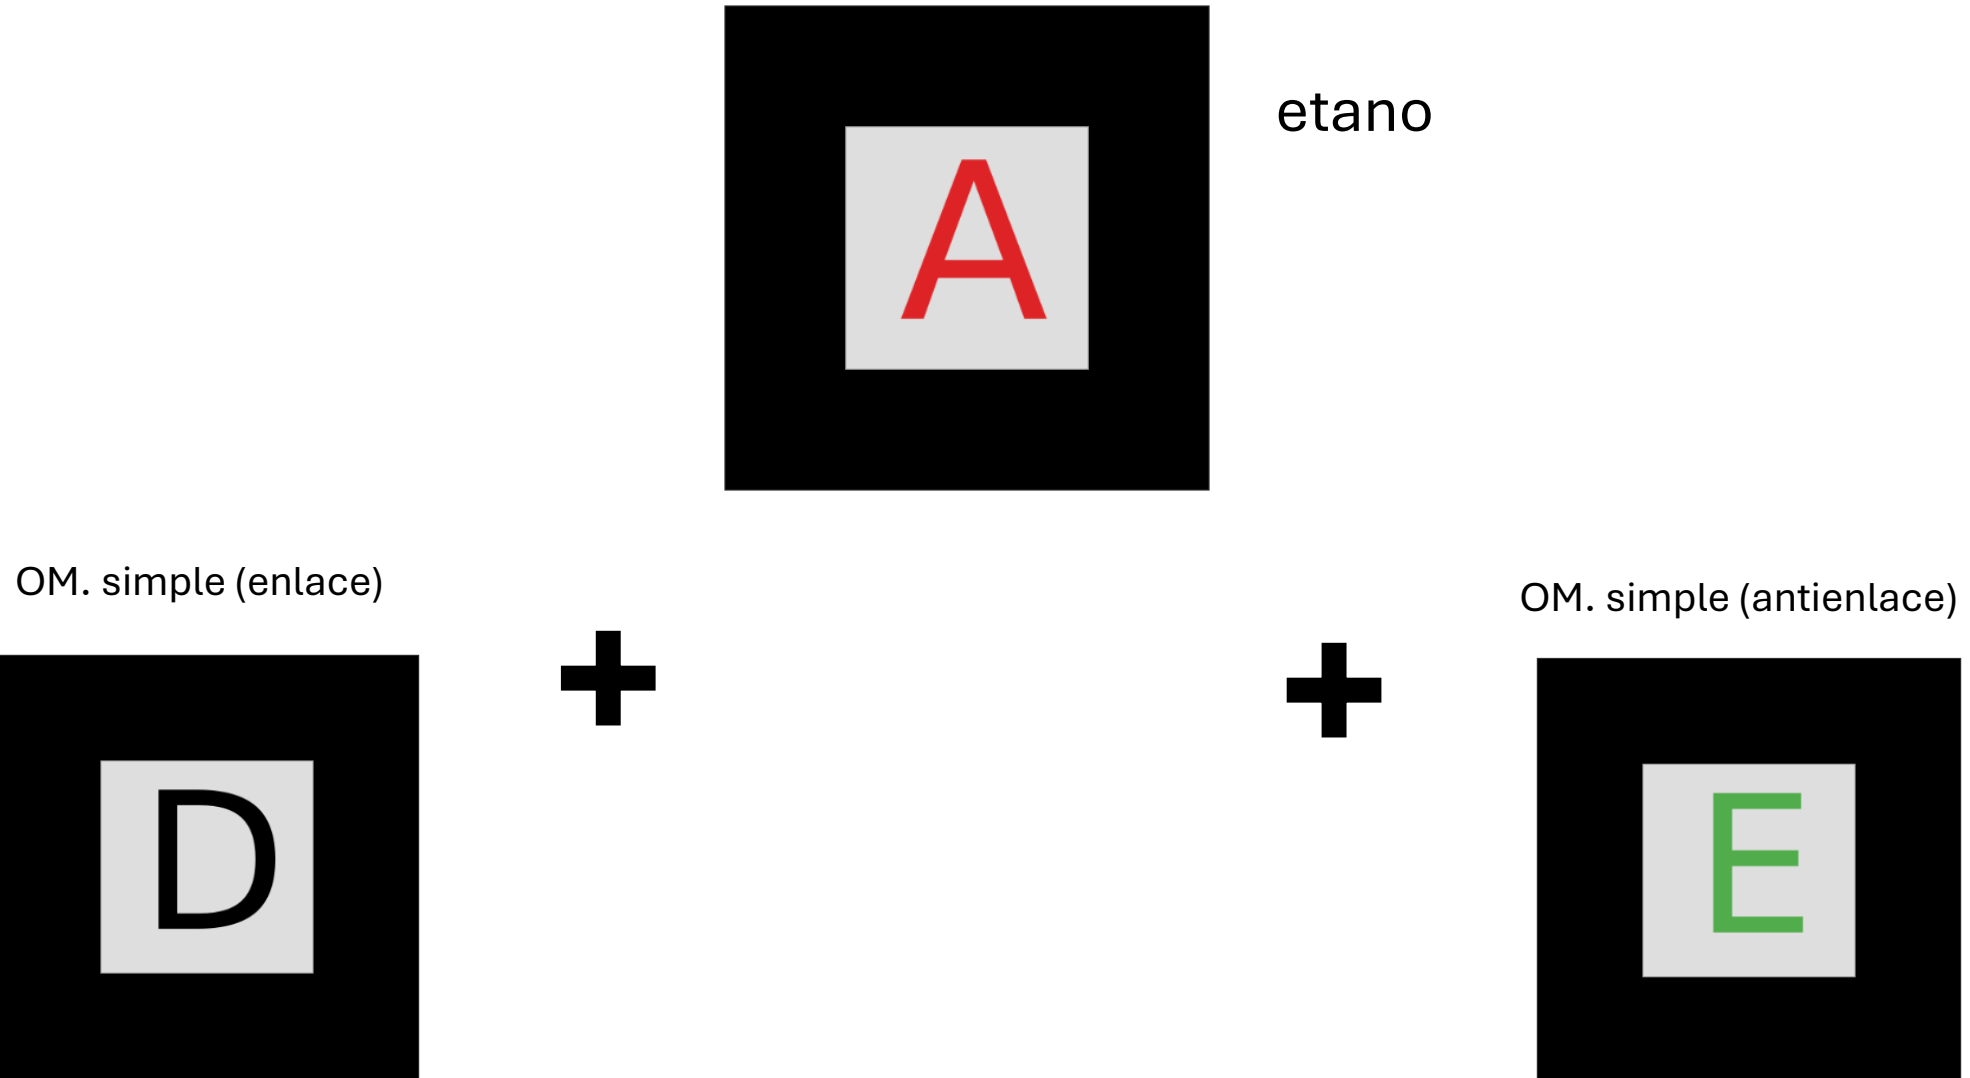

bipiramidal

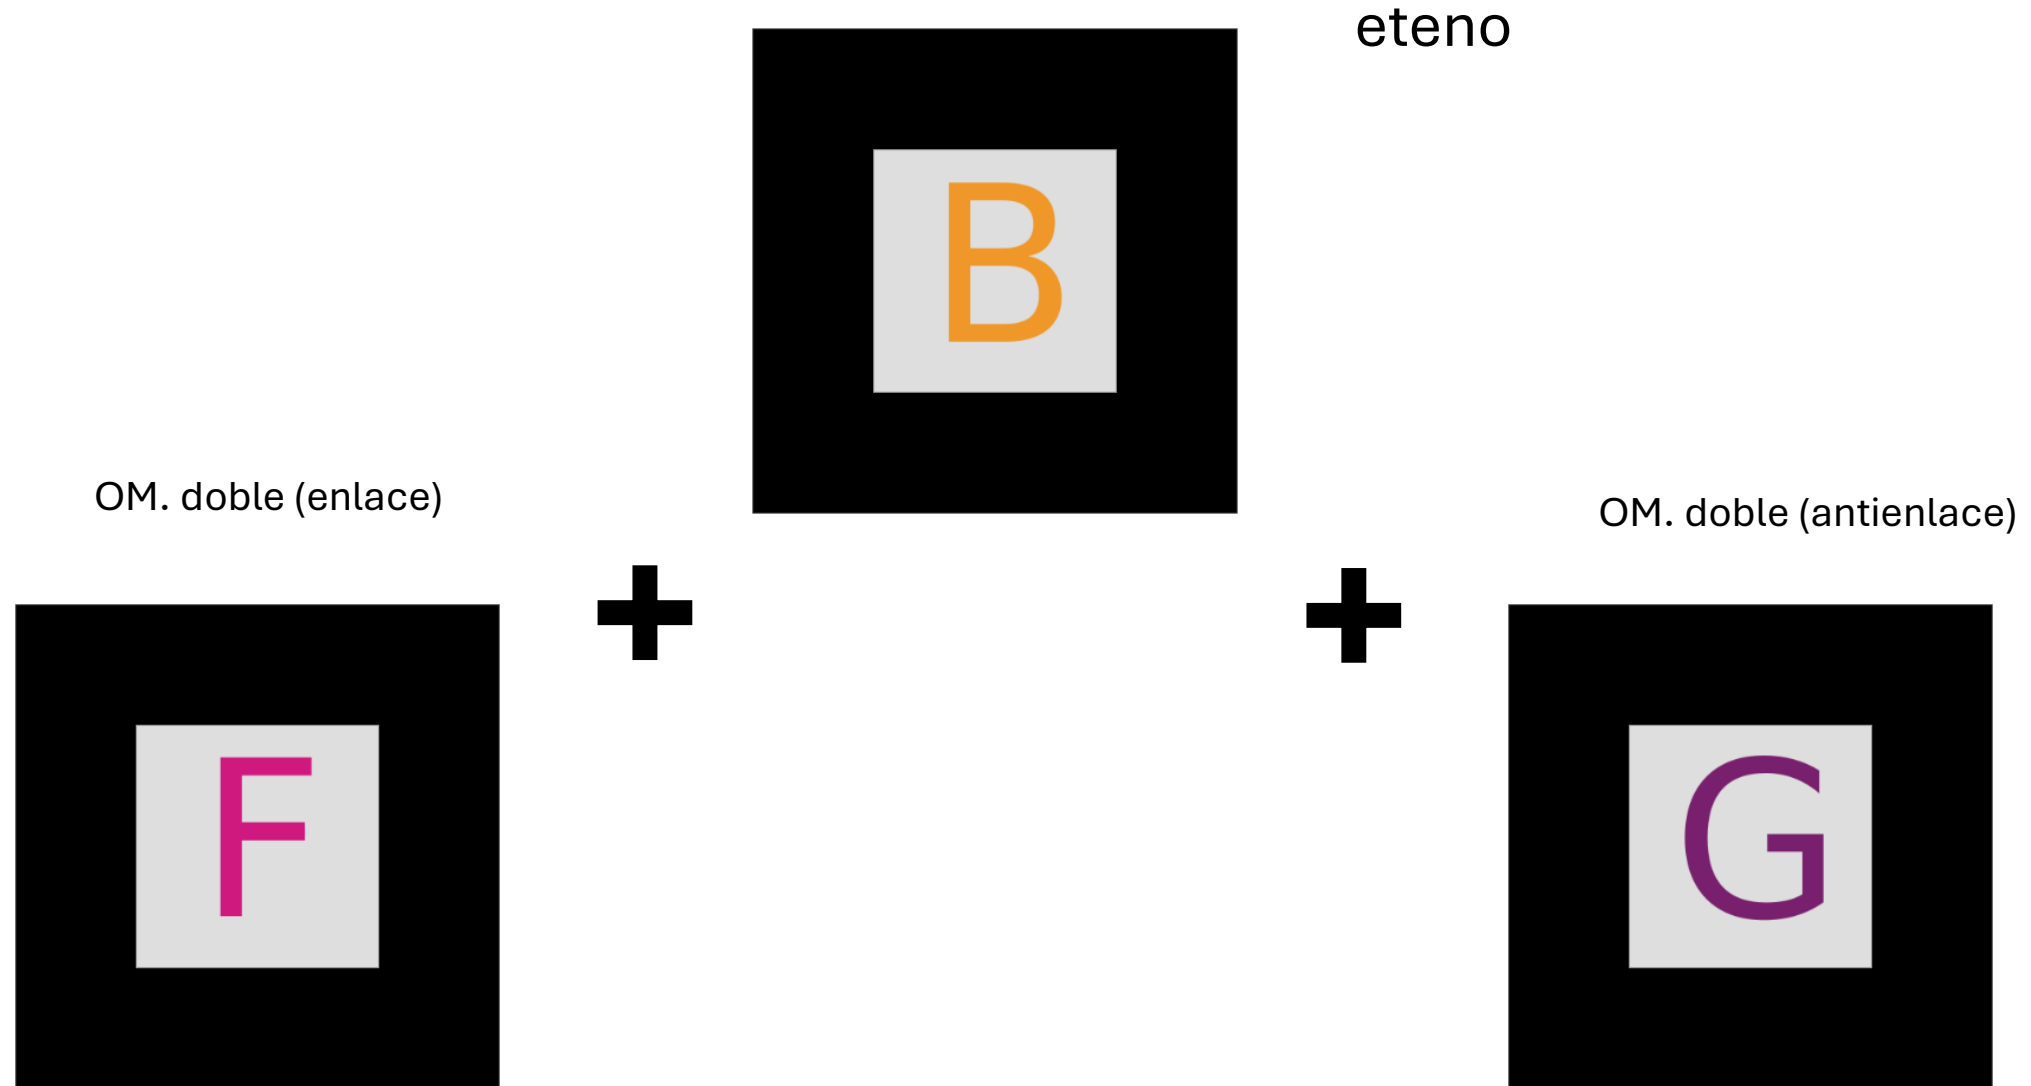

octaédrica

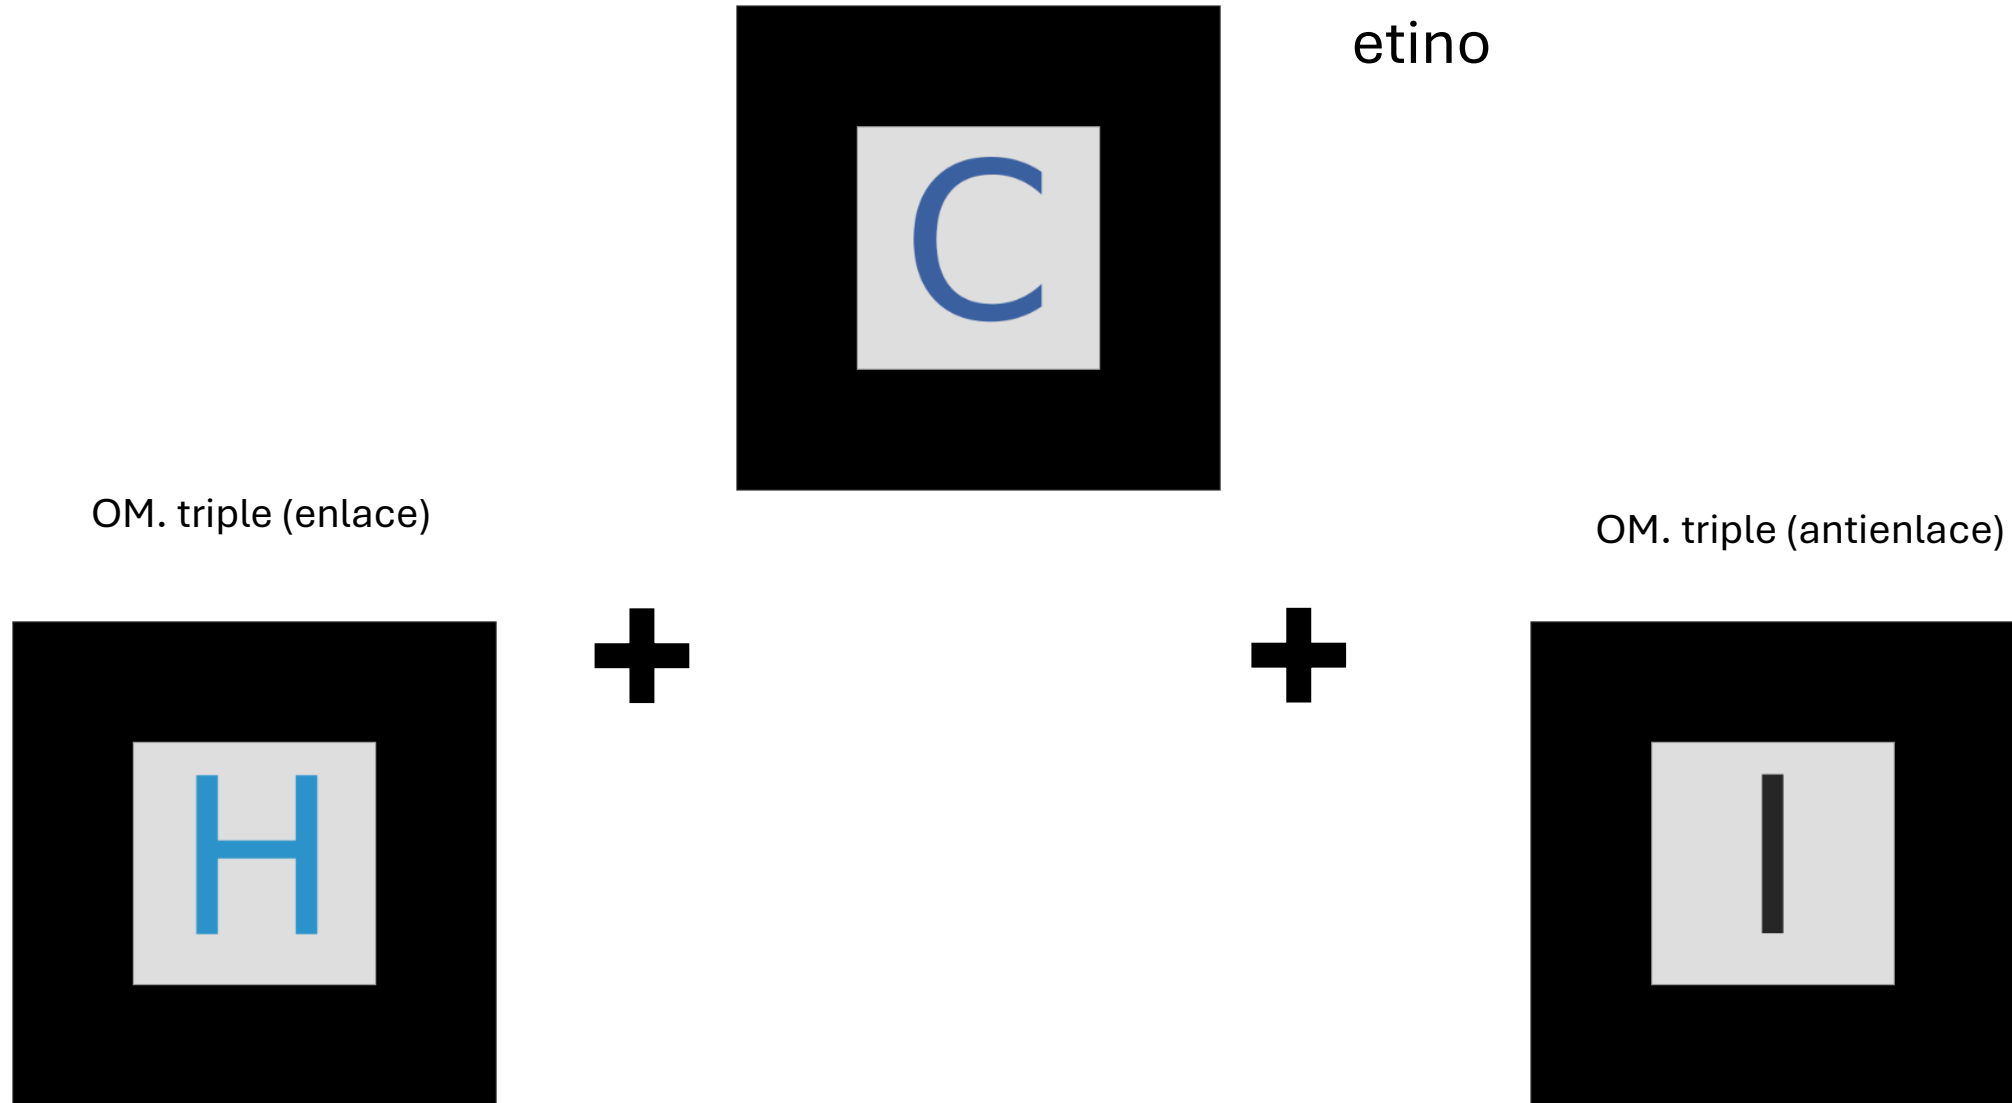

9. Orbitales moleculares (enlace y antienlace)

9. Orbitales moleculares (enlace y antienlace)

9. Orbitales moleculares (enlace y antienlace)

10. Fuerzas intermoleculares

A

Agua gaseosa

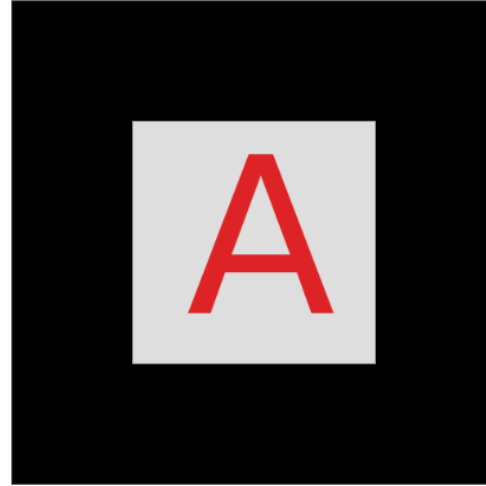

B

Agua sólida

C

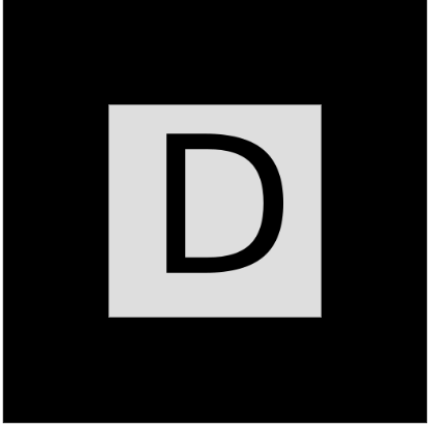

Agua líquida

11. Electroquímica: electrocatálisis

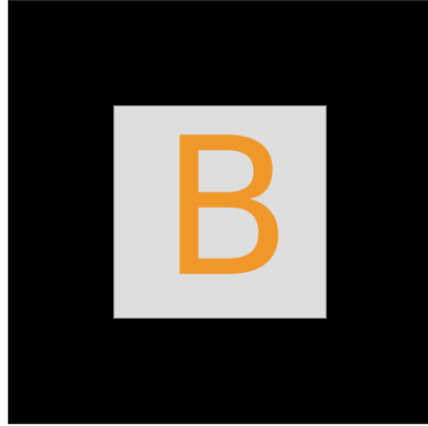

Au -CO₂

12. Alótropos de carbono

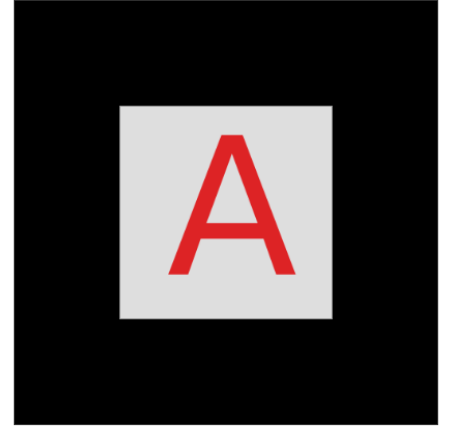

grafito

Nanotubos multipared

Nanotubos

grafeno

Fullereno 1

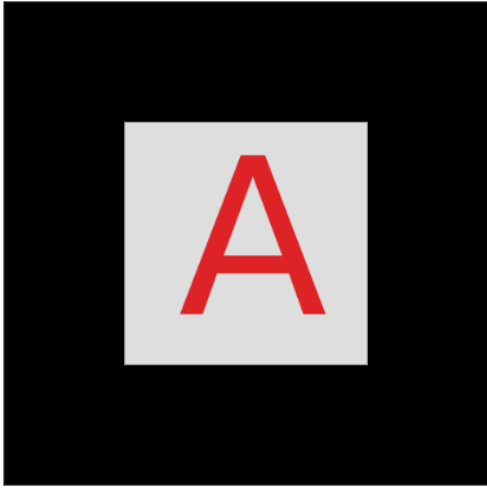

Fullereno 2

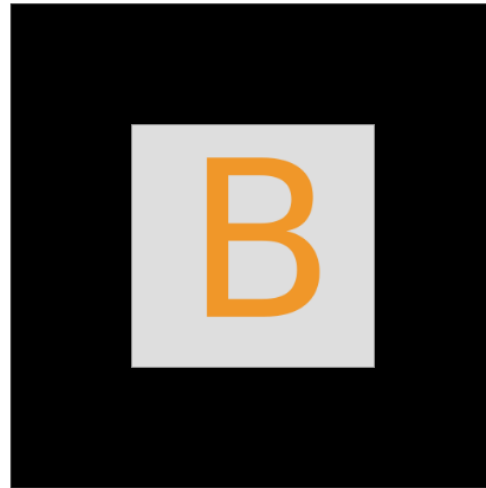

Diamante

13. Grafeno

grafeno

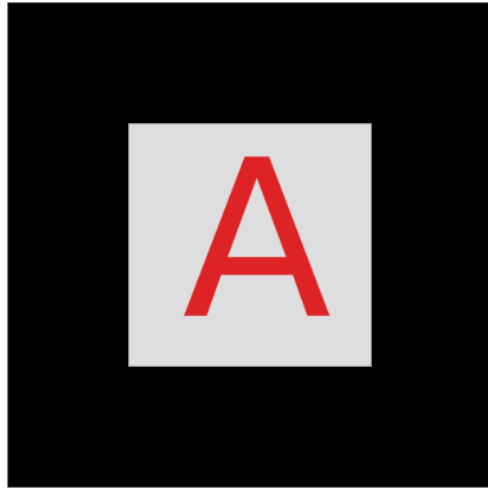

Óxido de grafeno

Hollow grafeno

14. Nanopartícula

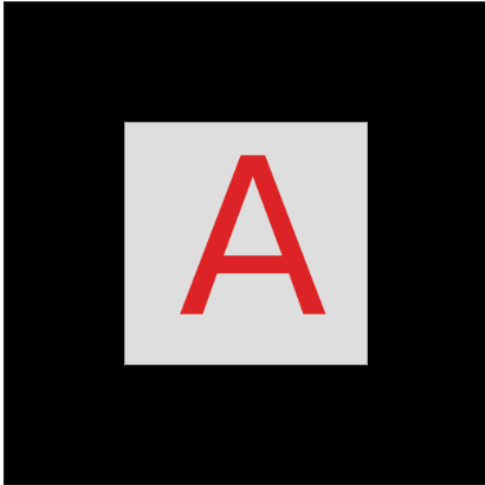

Nanopartícula esférica

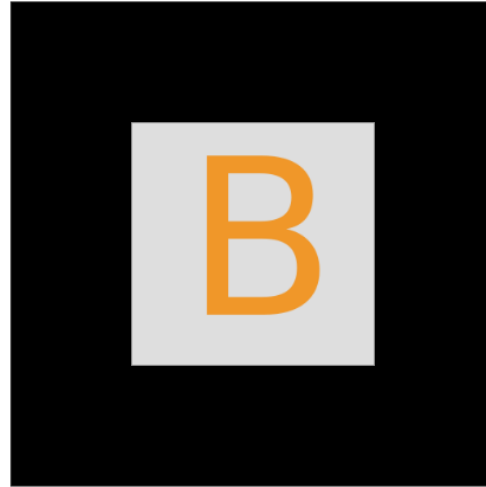

Nanopartícula policristalina

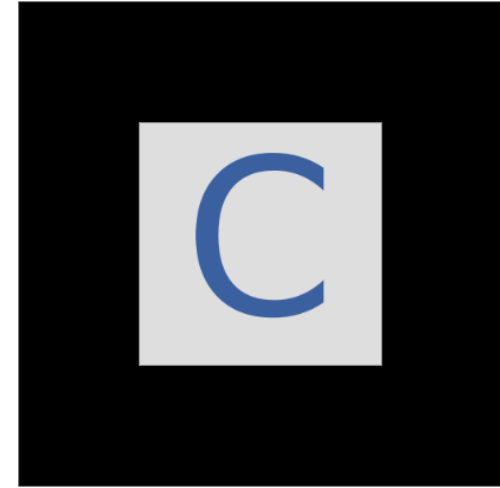

15. Quantum dots (punto cuántico)

Quantum dot 1

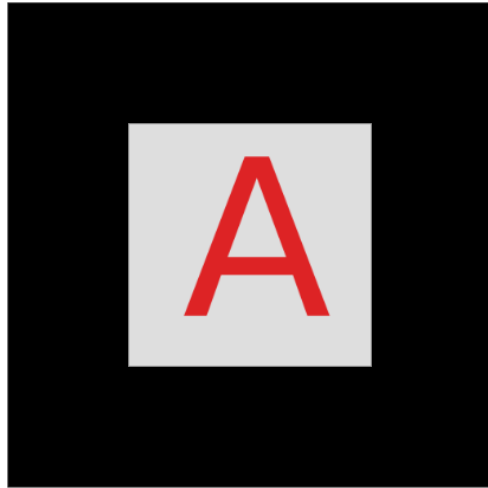

Quantum dot 2

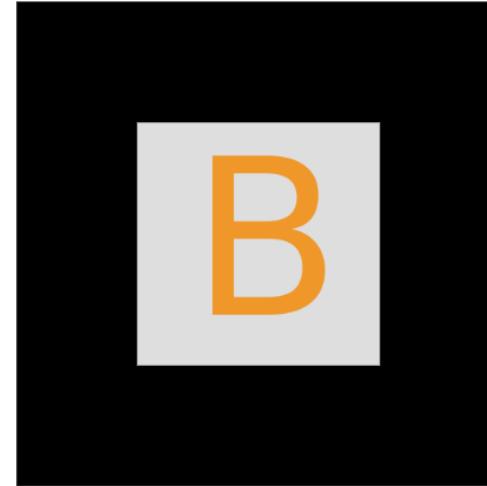

Quantum dot 3

16. Hemoglobina

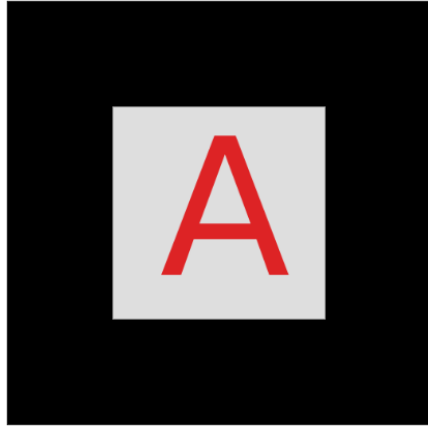

oxihemoglobina

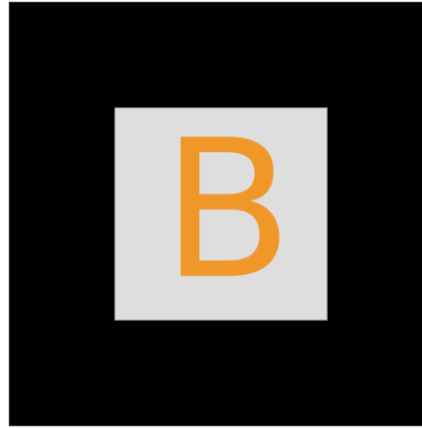

deoxihemoglobina

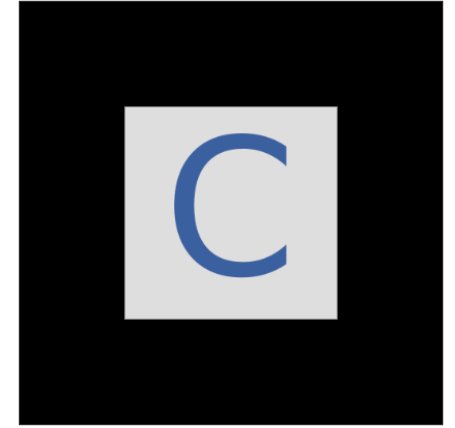

17. Ácidos nucleicos (ADN y ARN)

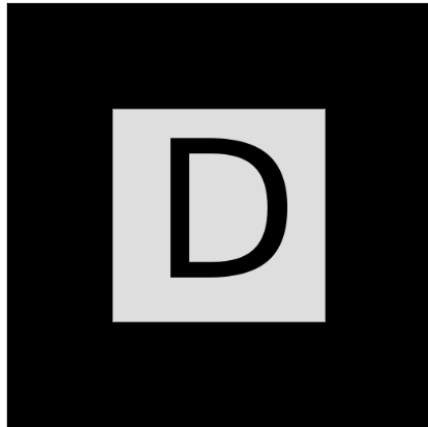

ARN

ADN

guanina

adenina

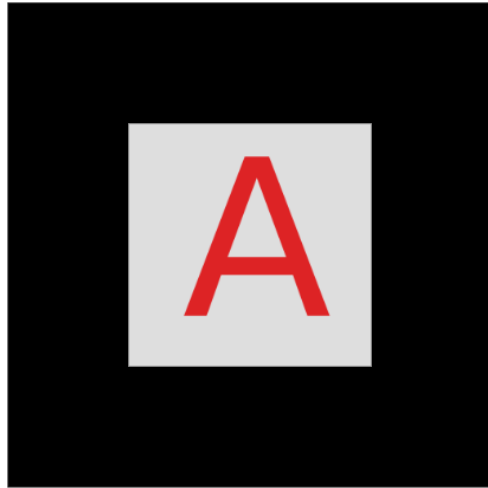

timina

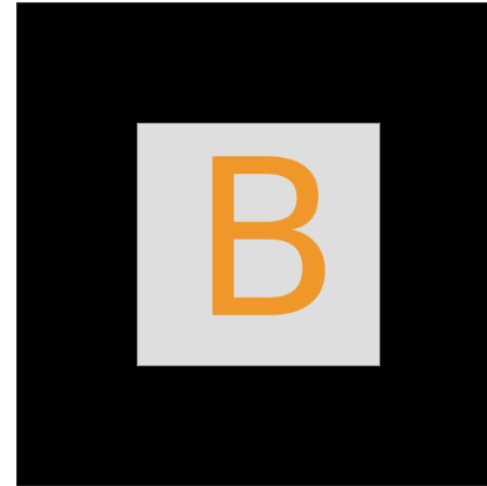

citosina

18. Célula y bicapa lipídica

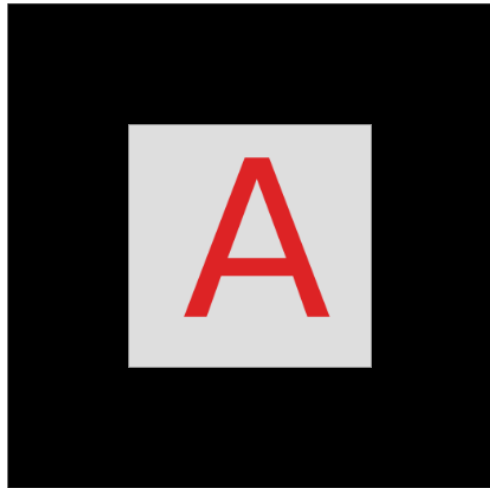

célula

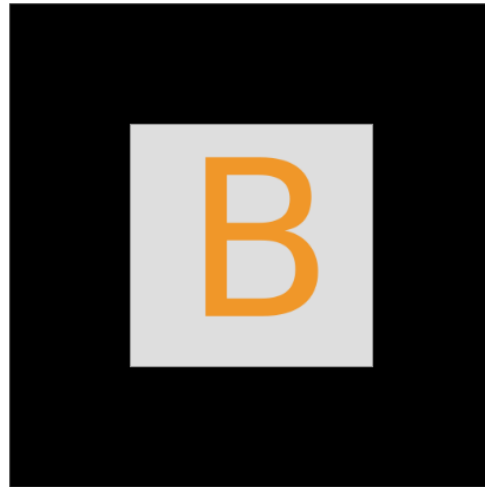

Bicapa lipídica

19. Otras moléculas

cafeína

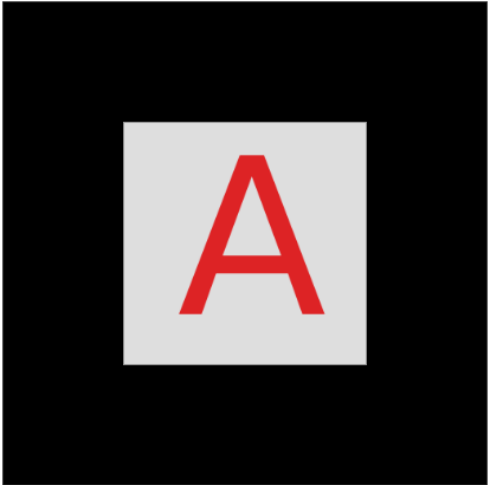

dopamina

oxitosina

20. Vidrio

A

SiO_2 cristalino

B

SiO_2 amorfo
